

Hello Dr. Lindsey,

My name is Sreevatsa Nukala and I attend BASIS Chandler as a rising senior. I plan to major in areas of bioinformatics and genomics when I attend college. My scientific interests pertain to bioinformatics and the interdisciplinary of data science and biology. I want to focus on entrepreneurship out of college and incorporate my scientific interests in starting a company. I most look forward to the hands-on experience in a real lab research situation. I am nervous about how I, specifically, will be able to cope with the rigorous workload but I think if I improve my time management, I can overcome this challenge. I am very excited to be participating in KEYS this summer and I look forward to the great experience I will get out of it.
